

Mightynetworks Security Scan Report

001

By respect to mightynetworks webmaster, By some friends advice we start a fast security check on your platform and I don't want to talk about final result at this moment but As our first Advice:

Your servers must not response to scan tools like nmap or ... If you don't like clouding companies politics Then we can offer you pure and open source cloud solution that hide receiver and responder Together.

We stop our security check, But as our team report there is critical problem...

If you interested to our reports, Then just lets play and communicate with us.

You can find some of our public learning articles there:
